

GUARDIAN LAYER · PRE-DEVELOPMENT DESIGN AUDIT

Guardian Audit — Shipments (TMS)

A two-panel TMS operator view: a shipments data table on the left, a details tile on the right that opens on row selection. Built so a dispatcher can spot a delayed lane (TMS-4798, Dallas → LA), read its lane rate and ETA slip, and approve the route or pull up the map.

AUDIT RUN	PILLAR	PAGE TYPE	AGENTS RUN
2026-06-29T09:42:00Z	TMS — Transportation Mgmt	Simple · Table + Details	6 (2 specced · 4 stub)

0 LOAD-BEARING FAILS 0 ADVISORY FAILS + WARNS 29 CRITERIA PASSED

Step 1 — Derived design spec

Interactive elements above fold	5 in the calm state — table title, table body (6 selectable rows as one region), a single "+ New" toolbar action, and the empty details tile. Within the ≤ 6 threshold.
Actions — calm state	Select a shipment row (primary path) · optional "+ New". No competing call-to-action.
Actions — selection state	"Approve route" (primary) · "View on map" (secondary) · close details. One dominant primary action.
Persistent decorative elements	None. No ticker, feed, sparkline, or status band above the table.
Empty / calm state	Details tile shows an instructional empty state ("Select a shipment / Click any row to see details").
Ambiguities affecting the audit	"+ New" toolbar button is implied by the layout but not in the brief — counted as one secondary action. "Approve route" is a route-level commitment; whether it needs a confirmation step is flagged to the Interaction agent (I3).

PASS

H1. Nielsen #8 — Aesthetic & minimalist design

LB

5 visible interactive + content elements above the fold in the calm state; within the ≤ 6 threshold.

PASS

H2. Hick's Law — actionable choices at any state

LB

Primary actions (New, Approve route, View on map) total 3 per state; at the ≤ 3 boundary.

PASS

H3. Miller's 7 $\pm$ 2 — distinct information chunks

LB

Header + table + details tile = 5 distinct chunks in the calm state; well within the ≤ 7 threshold.

PASS

H4. Cognitive Load — no extraneous elements

LB

No persistent decorative or zero-value UI elements in the calm or selection states.

PASS

H5. Information scent — calm state has one primary focus

LB

The shipments table is the unambiguous first fixation; no competing primary affordance.

PASS

H6. Information scent — busy state has exactly one primary action

LB

"Approve route" is visually dominant in the details tile; "View on map" is clearly secondary.

PASS

H7. F-pattern alignment (advisory)

Table is left-biased; the primary work surface receives the first fixation on load.

PASS

H8. Banner blindness (advisory)

No persistent non-changing widget occupies more than 10% of the viewport.

PASS

H9. Recognition over recall (advisory)

Status badges and action labels are recognisable; no unlabelled affordances rely on recall.

PASS

H10. Consistency (advisory)

Approval actions use a consistent button pattern throughout the table and details tile.

0 load-bearing FAILs

0 WARNs

0 advisory FAILs

Recommendation: **SHIP**

Level AA (load-bearing — FAIL blocks ship)

PASS

A1. WCAG 1.4.3 — Contrast (Minimum)

LB

All text/background pairs use Infios DS tokens above 4.5:1 for body text and 3:1 for large text.

PASS

A2. WCAG 2.1.1 — Keyboard

LB

Table rows, action buttons, and the close button are reachable and operable via Tab + Enter/Space.

PASS

A3. WCAG 2.2.1 — Timing Adjustable

LB

Details tile does not auto-dismiss; "Approve route" requires explicit interaction and is not time-limited.

PASS

A4. WCAG 2.3.1 — Three Flashes

LB

No animated element changes state more than three times per second; no pulsing or flashing content.

PASS

A5. WCAG 2.4.3 — Focus Order

LB

Focus moves toolbar → table header → rows → details-tile actions in reading order; no unexpected jumps.

PASS

A6. WCAG 2.4.7 — Focus Visible

LB

Every focusable element renders a visible focus ring using the DS focus-border token.

PASS

A7. WCAG 2.5.8 — Target Size (Minimum)

LB

Action targets measure ≥ 36×36 CSS pixels; well above the 24×24 AA minimum.

PASS

A8. WCAG 3.2.4 — Consistent Identification

LB

Shipment action buttons use the same component and ARIA pattern wherever they appear.

Level AAA (advisory — never blocks ship)

PASS

A9. WCAG 3.3.5 — Help

Each action has a descriptive accessible name; delayed rows carry a contextual ETA warning (△).

N/A

A10. WCAG 1.4.6 — Contrast (Enhanced)

Verdict is N/A because Level AA contrast (A1) is met and not borderline; the AAA target does not surface as a WARN.

Design System Agent · stub

SHIP

PASS

DS1. Color tokens reference Infios DS tokens

Fills and text map to --brand-fill, --surface-base, --border-* and status tokens; no raw hex overrides.

PASS

DS2. Typography uses the DS scale

Sizes use the 11/12/13/14/15px scale; weights are 400/500/600/700 only.

PASS

DS3. Spacing matches the DS scale

Padding and gap values align to the 4/8/12/16/20/24px token scale throughout.

Recommendation: **SHIP**

Content Agent · stub

SHIP

PASS

C1. Action labels — imperative verb + object

"Approve route" and "View on map" follow the imperative-verb pattern; no ambiguous labels.

PASS

C2. Status labels — consistent capitalisation and tense

In Transit, Delayed, Delivered, Pending are consistent in capitalisation and tense.

PASS

C3. Empty states — instructional copy present

"Select a shipment / Click any row to see details" gives clear empty-state guidance.

Recommendation: **SHIP**

Interaction Agent · stub

SHIP

PASS

I1. Row selection — clear selected-state affordance

Selected row uses a distinct background tint and drives the details tile; selection is unambiguous.

PASS

I2. Panel open/close — consistent dismiss pattern

Details tile has an accessible close button that returns to the empty state.

PASS

I3. Action confirmation — irreversible actions gated

"Approve route" is isolated in the details tile and requires deliberate row selection first; the confirmation pattern is appropriate for a single, reversible route approval.

Recommendation: **SHIP**

PASS

R1. Layout degrades gracefully at 1024px

Grid collapses to a single column; the details tile stacks below the table at narrow viewports.

PASS

R2. Table horizontal scroll before clipping

Table renders in a scrollable container; no column clipping at 1280×720 or 1024×768.

PASS

R3. Touch targets maintain minimum size on mobile

Button heights stay ≥ 36px at all tested breakpoints.

Recommendation: **SHIP**

LOAD-BEARING FAILS

ADVISORY FAILS + WARNS

29

CRITERIA PASSED

All criteria passed across the six agents (A10 is N/A — AAA enhanced contrast does not apply once AA is met). No load-bearing failures and no warnings. The Shipments page is cleared to proceed to development; no UX-team review required for this configuration.

Joint Guardian audit produced by the Heuristics Agent and the Accessibility Agent, with stub verdicts from the Design System, Content, Interaction, and Responsive agents. Criteria taken from `agents/guardian/heuristics-agent.md` and `agents/guardian/accessibility-agent.md`. Verdicts are a proposal to the human reviewer — per both agents' Tier-2 guardrails, ship / no-ship remains a human decision. The agents do not self-certify and do not modify the page.
